"The Political Economy of Environmental Movements: U.S. Experience and Global Movements"

Everett, Michael D., and Robert Peplies

Everett, Michael D., and Robert Peplies. "The Political Economy of Environmental Movements: U.S. Experience and Global Movements." *Environmental Values* 1, no. 4, (1992): 297–310.
[doi:10.3197/096327192776680043](https://doi.org/10.3197/096327192776680043).

In 1972 a public choice model predicted that the incipient environmental movement in the United States would grow but encounter overwhelming industrial opposition. Twenty years later we find the model overstated this opposition. Environmental pressure groups were able to pass substantial legislation, resist counter forces, and reduce most targeted pollutants. A revised public choice model predicts that the success of the present global environmental movement depends on (1) information flows between scientists and the public on the potential costs of deterioration, and (2) means for reducing the costs of regulation such as relying more on market incentives.
