The Spinning Jenny

Bassen, Milena

The invention of the spinning jenny in 1764 sparked a movement that would change the lives of people worldwide. The economy had been stagnating for centuries. Eighty percent of the world's population was working in the countryside; many were malnourished, with an average life expectancy of 28 years. However, the rapid mechanization of the textile industry spurred a period of growth, shifting the focus of economic and social life from the countryside to the expanding cities. This trend continues today: by 2050, 80 percent of the population will be living in cities, especially in southern Asia, Africa, and South America. These enormous changes require new solutions for supplying energy and developing infrastructure. Sustainable urban development would be a big step toward a sustainable Anthropocene future.

Spinning Jenny by James Hargreaves, Inv.-Nr.: 1910/25202

Spinning Jenny: How a spinning machine gave impetus for capital- and industrial society.

“The weavers need more yarn. I can’t keep up with spinning!”

“Here comes the next company for the spinning work...”

In order to compensate the industry’s demand for yarn, Germany ordered its soldiers to man the spinning wheels.

In 1761 in England, a contest was held to invent a spinning machine.

“This cannot go on like this! We need to do something!”

But development could not be stopped. The machines got better and better, and soon one textile factory was built after another.

Drawn by *Milena Bassen*, 2014. This work is licensed under a [Creative Commons Attribution-NonCommercial-NoDerivatives 4.0 International License](https://creativecommons.org/licenses/by-nc-nd/4.0/).

The spinners had to move to their work into the cities. There they lived in inhumane conditions.

Drawn by Milena Bassen, 2014. This work is licensed under a [Creative Commons Attribution-NonCommercial-NoDerivatives 4.0 International License](https://creativecommons.org/licenses/by-nc-nd/4.0/).

“The factory owner is getting richer and richer, and I get poorer!”
The new machines produced goods in masses. Whereas before, many people could make only a little, nowadays one person could make a lot. But the wages stayed the same.

Artist's comment

As I researched on the spinning machine, it quickly became clear to me that one single invention can completely overturn a centuries-old craft and the way of life associated with it within a few years. In this case, an invention that gave rise to a new era: the industrialization. Textile workers are still having to cope with the consequences of this innovation today.
